Sequence 10, Application US/09928267
GENERAL INFORMATION:
TITLE OF INVENTION: ENGINEERED RECOMBINANT MOLECULE THAT REGULATES HUMORAL AND TITLE OF INVENTION: CELLULAR EFFECTOR FUNCTIONS OF THE IMMUNE SYSTEM FILE REFERENCE: 1097-19
CURRENT APPLICATION NUMBER: US/09/928,267
CURRENT FILING DATE: 2001-08-10
NUMBER OF SEQ ID NOS: 27
SEQ ID NO 10
LENGTH: 261
TYPE: PAT
TYPE: PAT
ORGANISM: pig and human
US-09-928-267-10
                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

patent No. 681239

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APLICATION NUMBER: (0/241,755

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR PILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 135

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Proc. Natl. Acad. Sci. U.S.A. 88:9458-9462(1991).
-!- FUNCTION: Strongly inhibits juvenile hormone biosynthesis
by the corpora allata from fifth-stadium larvae and adult
-!- SIMILARITY: Belongs to the allatostatin family.

Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,
Eupidosauvia, Squamata, Scleroglossa, Serpentes, Colubroidea,
Viperidae, Crotalinae, Crotalus.
  -!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom gland.
-!- SIMILARITY: Belongs to the peptidase S1 family. Snake venom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 25; DB 2; Length 15; Pred. MEDLINE=75145197; PubMed=1092268;

Taolas O., Sun S.C.; representation of a peptide containing a histidinyl-cysteinyl sequence of translation of a peptide containing a histidinyl-cysteinyl sequence of from the active center of transladolase.";

Arch. Biochem. Biophys. 167:525-531(1975).

-!- FUNCTION: Transladolase is important for the balance of metabolites in the pentose-phosphate pathway.

-!- CATALYTIC ACTIVITY: Sedoheptulose 7-phosphate + D-glyceraldehyde 3-phosphate = D-erythrose 4-phosphate + D-fructose 6-phosphate.

-!- PATHWAY: Pentose phosphate pathway; nonoxidative part.

-!- SIMILARITY: Belongs to the transaldolase family. Subfamily 1.

Determining impact of blood sugar level on glycation levels in diabetic patient involves measuring level of lysine residue at specific position in glycated membrane protein associated with regulation of complement system.

Example 5; SEQ ID NO 1; 18pp; English.

The invention relates to determining the impact of blood sugar level on protein glycation levels in a subject involves measuring a level of lysine residue at position 41 in a glycated membrane protein CD59 (K41-glycated CD59) from a sample (e.g. urine). Also included are evaluating/selecting a treatment for regulating blood sugar levels (e.g. in a patient suffering from diabetes mellitus), determining regression, progression or onset of a condition caused by abnormal levels of glycated protein, treating a subject to reduce the risk of or progression of

disorder associated with abnormally high levels of K41-glycated CD59, a Composition comprising isolated, pure or fragment of isolated K41-glycated CD59. The method is used to K41-glycated CD59 with not to K41-nonglycated CD59. The method is used to monitor glycaemic control in a diabetic patient, and to select subject for therapy, to monitor onset, progression and/or regression of diabetes or other diseases by monitoring levels of glycated CD59 in subject. The method provides direct indication of the level of the subject. S glycaemic control thus effectively CD59 can be detected in urine, thus obviating the need for a blood sugar levels or glycation levels. The glycated sample. The present sequence is a peptide used to raise anti-CD59 antibodies, comprising amino acids 36-50 of human CD59.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             i'n

comprising one or more single nuclectide polymorphisms (SDPS). ABB56531

Conjournelocides The sequences from the present invention can have clienteded. ABB56903 represent human peptides encoded by some of the SNP coligonucleotides. The sequences from the present invention can have immunosuppressive, cytostatic, antiinflammatory, neuroprotective and antimodiaes from the present invention can be used for treating a subject suffering from, at risk for, or suspected of, suffering from a pathology ascribed to the presence of a sequence polymorphism. The pathology may be autoimmune diseases, inflammation, cancer, diseases of the nervous system, and infection by pathogenic microorganisms. The SNPs are also useful for determining which forms of a characterised polymorphism are present in individuals. The antibodies may be used in the detection, quantitation and/or cellular or tissue localisation of a polymorphic protein (e.g., for use in measuring levels of the polymorphic protein within appropriate physiological samples)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                        Isolated human nucleic acids comprising one or more single nucleotide polymorphisms, useful for treating a subject suffering from a pathology, e.g. autoimmune diseases, ascribed to the presence of a sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; G protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; call regeneration-related disease; ALDS; cancer; immunological-related cell proliferative disease; autoimmune disease; Alzbeimer's disease; atherosclerosis; infection; osteoarthritis; allergy; osteoporosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma; ulcer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                1 TAT protein and HIV-1 gp120 which are useful for inhibiting the entry of HIV-1 into a host cell. The inhibitors of the interaction between HIV-1 TAT protein and HIV-1 gp120 are useful for inhibiting the entry of HIV-1 into a host cell for treating infections caused by M-tropic or L-tropic HIV-1 strains. This sequence represents a peptide derived from the HIV-1 TAT86 protein which is used as an inhibitor of HIV-1 entry into cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                  invention relates to novel inhibitors of the interaction between HIV-
                                                                                                                                                                                                                                                                                                                                                      Use of inhibitors of the interaction between HIV-1 TAT protein and HIV-1 gpl20 for inhibiting the entry of HIV-1 into a host cell for treating infections caused by M-tropic or L-tropic HIV-1 strains.

The present interiors an assay for the detection of a particular or acids. Also described: (1) an assay for the detection of a particular or acids. Also described: (1) an assay for the detection of a particular or acids. Also described: (1) an assay for the detection of a particular G or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (1) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody squinst a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the gresence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, immunological-related ciseases, cell creating immune diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, catheroscierosis, bacterial, fungal, protozoan or viral infections, other contral infections, other contral infections, catheroscierosis, cancer, cardiomyopathy, chronic and acute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SAG1; antigen; toxoplasmosis; subunit vaccine; Pichia pastoris; epitope; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memoral sos, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABPB1675 to ABPR82018, which are used in the exemplification of the present invention

                                                                                                                                                                                                                                                                                               The invention relates to the recombinant production of the toxoplasma antigen SAG1 or a fragment thereof in the yeast Pichia pastoris. SAG1 is the major surface antigen of Toxoplasma gondii, an obligate intracellular protozoan parasite responsible for toxoplasmosis in mammals, including humans. SAG1 is anchored to the plasma membrane of T. gondii via a GPI (glycosyplpossphatidylinositol) anchor, which is atteched to the C-terminal anchor region (residues 308-336). The invention provides a truncated SAG1 protein, which lacks the anchor region and comprises amino acids 48-307, and a SAG protein N-terminally fused to a yeast secretion signal peptide. The SAG1 protein and its fragments can be used in the manufacture of a subunit vaccine for the prevention or treatment of toxoplasmosis in mammals. A live attenuated Toxoplasma vaccine is available, but cannot be administered to humans due to the risk of recombinant expression of SAG1 has been attempted in Escherichia coli,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       mammalian cells or S. cerevisiae, but has been associated with problems such as misfolding and insolubility, low yields of correctly folded SAG1, or heterogeneous protein production. In addition, purification of the native protein from tachyzoites is difficult and time-consuming, due to the GPI anohor. Sequences AAY58595-Y55596 represent peptide epitopes of T. gondii SAG1, which were used to raise polyclonal antibodies in an exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ingrogness intributor; unsure growth inhibitor;

The present invention describes a crystallised NCI domain hexamer of type C IV collagen (I). Also described: (1) a chimeric polypeptide; (2) a pharmaceutical composition comprising the polypeptide and a carrier; (3) inhibiting angiogenesis in tissue; (4) treating an angiogenesis-mediated disease or condition in a mammal; (5) inhibiting tumour metastasis or growth; (5) inhibiting endothelial cell interaction with the extracellular matrix in an animal tissue; (6) inhibiting basal lamina membrane formation in cell or tissue; (6) inhibiting basal lamina comprane formation in cell or tissue; (6) inhibiting basal lamina membrane of type IV collagen; (8) identifying inhibitors of type IV collagen assembly; and (9) an inhibitor of type IV collagen assembly. A crystallised NCI domain hexamer of type IV collagen (I) has cytostatic, antianaemic, ophthalmological, antiarteriosclerotic and antiulora activities, and can be used as an inhibitor of angiogenesis, cumour growth, tumour metastasis, endothelial cell adhesion, endothelial cell proliferation, and basal lamina assembly. A (I) polypeptide can be used for treating of glaucoma, sickle cell anaemia, ulcerative colitis, cor for inhibiting bumour metastasis, cor for inhibiting bumour metastasis or growth, inhibiting endothelial coll sease or condition with the extracellular matrix in an animal tissue, and controllar and assembly. A (I) the cell or tissue cells intracation with the extracellular matrix in an animal tissue, and controllar and assembly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         identifying inhibitors of type IV collagen assembly. The present sequence represents a peptide which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polypeptide, useful for treating an angiogenesis-mediated disease or condition consisting of glaucoma or blood-borne tumors or for inhibiting basal lamina membrane formation in cell or tissue development.
endothelial cell proliferation inhibitor; glaucoma; sickle cell anaemia; ulcerative colitis; psoriasis; atherosclerosis; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

New polypeptide, useful for treating an angiogenesis-mediated disease or condition consisting of glaucoma or blood-borne tumors or for inhibiting basal lamina membrane formation in cell or tissue development.

Claim 5; SEQ ID NO 3; 168pp; English.

Inhibiting angiogenesis, angiogenesis-mediated diseases or conditions, tumor metastasis, and tumor growth, involves contacting subject with crystallized type IV collagen NCI domain hexamer polypeptide.

Disclosure, SEQ ID NO 3; 178pp; English.

The present invention describes a crystallised NCI domain hexamer of type IV collagen (I). Also described: (1) a chimeric polypeptide and a carrier; (2) a chharmaceutical composition comprising the polypeptide and a carrier; (3) inhibiting angiogenesis in tissue; (4) treating an angiogenesis-mediated disease or condition in a mammal; (5) inhibiting tumour metastasis or extracellular matrix in an animal lissue; (6) inhibiting basal lamina membrane formation in cell or tissue development; (7) a crystal of an NCI contagen assembly, and (9) an inhibitor of type IV collagen assembly. A crystallised NCI domain hexamer of type IV collagen (I) has cytostatic, antipsoriatic, antiansemic, ophthalmological, antiateriosclerotic and antipsoriatic, antiansemic, ophthalmological, antiateriosclerotic and antiplocra activities, and can be used as an inhibitor of angiogenesis, tumour growth, tumour metastasis, endothelial cell adhesion, endothelial cell proliferation, and basal lamina assembly. A (I) polypeptide can be used for treating of glaucoma, sickle cell anaemia, ulcerative colitis, consisting of glaucoma, sickle cell anaemia, ulcerative colitis, consisting of glaucoma, sickle cell anaemia, ulcerative colitis, corsisting basal lamina membrane formation in cell or tissue cellopment. The methods are useful for inhibiting angiogenesis in tissue, inhibiting the are useful for inhibiting endothelial cell interaction with the extracellular matrix in an animal tissue, and cidentifying inhibitors of type IV collagen assembly. The present expresent invention

The invention relates to a novel method for inhibiting angiogenesis, and angiogenesis-mediated diseases or conditions, tumour metastasis, and tumour growth, involving contecting a subject with a crystalised type IV collagen NC1 domain hexamer polypeptide. A polypeptide of the invention has angiogenic, cutiathritic, immunosuppressive, antiseborrheic, antibacterial, vulnerary, antiulcer, fungicide, virucide, protozoacide, anti-HIV, antiinflammatory, antianaemic, antisickling, cateopathic, vasorropic, gastrointestinal, antipsoriatic, and of cateopathic, vasorropic, gastrointestinal, antipsoriatic, and of cateopathic, vasorropic, gastrointestinal, antipsoriatic, and of cateopathic, vasorropic, gastrointestinal, antipsoriatic, and catefaction antiatherosclerotic activity. The polypeptide inhibits assembly of type IV collagen heterotrimers and hexamers. The method of the invention is useful for inhibiting angiogenesis, angiogenesis-mediated diseases or conditions, tumour metastasis and tumour growth. The angiogenesis or conditions, thematorial angiogenesis, angiogenesis magiogenesis.

Tetinopathy of prematurity, corneal graft rejection, neovascularisation, mecular degeneration, corneal neovascularisation, mecular degeneration, corneal neovascularisation, chorolarial fibroplasia, epidemic keratoconjunctivitis, cyphyllis, Mycobacteria infections, lipid degeneration, chemical burns, cyphyllis, Mycobacteria infections, lappaes simplex infections, Harpes zoster infections, protozoan infections, Raposi's sarcoma, Mooren ulcer, Terrien's marginal degeneration, maginal keratolysis, trauma, systemic lupus, polyarteritis, Megeners sarcoidosis, scleritis, Steven's Johnson Lupus, polyarteritis, Regeners sarcoidosis, scleritis, scleven's Johnson

from heat-treated silkworm body fluid. The new virus infection factor
IV collagen heterotrimers and hexamers. The method of the invention is useful for inhibiting angiogenesis, angiogenesis-mediated diseases or conditions, tumour metastasis and tumour growth. The angiogenesis-mediated disease or condition is solid and blood-borne tumours, diabetic retinopathy, rheumatoid arthritis, retinal neovascularisation, choroidal neovascularisation, macular degeneration, corneal neovascularisation, retinopathy of prematurity, corneal graft rejection, neovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Amino terminal; silkworm; virus infection factor; promoter; recombinant;
                                                                                                                                                                                                                                                                                                                                                                                                                   toxoplasmosis, post-laser complications, abnormal proliferation of fibrovascular tissue, haemangiomas, Osler Weber-Rendu, AIDS, ocular neovascular disease, osteoarthritis, chronic inflammation, Crohn's disease, ulcerative colitis, psoriasis, atherosclerosis and pemphigoid. The present sequence represents a peptide of the invention, derived fro type IV collagen crystallised NC1 domain hexamer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Virus infection factor from silkworm body fluid - used to promote infection of insect cells with protein-expressing recombinant virus in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a novel modified molecule comprising the biological activity of human erythropoietin (BPO) and being substantially non-immunogenic or less immunogenic than any non-modified molecule having the same biological activity in an individual when used in vivo. The invention is useful for manufacturing a modified human erythropoietin amplications, such as in the treatment of anaemia. The present sequence is that of a human EPO epitope peptide which is related to the invention.
(VIF) is useful for promoting the infection of insect cells with recombinant nuclear polyhedrosis virus. The virus having been recombined with a useful protein-expressing gene. The insect cell can then be cultured and the useful protein expressed at high yields. The new VIF has a mol. wt. of approx. 15.2 kba and an isoelectric point of 9 or higher. This invention relates to a novel modified molecule comprising the biological activity of human erythropoietin (EPO) and being substantially non-immunogenic or less immunogenic than any non-modified molecule having the same biological activity in an individual when used in vivo. The invention is useful for manufacturing a modified human erythropoietin molecule. The modified BPO may be used in various therapeutic applications, such as in the treatment of anamnia. The presence is that of a human EPO epitope peptide which is related to the invention.
                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                             This invention relates to a novel modified molecule comprising the biological activity of human erythropoietin (EPO) and being substantially non-immunogenic or less immunogenic than any non-modified molecule having the same biological activity in an individual when used in vivo. The invention is useful for manufacturing a modified human erythropoietin ampleule. The modified EPO may be used in various therapeutic applications, such as in the treatment of anaemia. The present sequence is that of a human EPO epitope peptide which is related to the invention.
                                                                                                                                               New modified human erythropoietin molecules with reduced immunogenicity, useful in various therapeutic applications such as in the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New modified human erythropoietin molecules with reduced immunogenicity, useful in various therapeutic applications such as in the treatment of

This invention relates to a novel modified molecule comprising the

```
non-immunogenic or less immunogenic than any non-modified molecule having the same biological activity in an individual when used in vivo. The invention is useful for manufacturing a modified human exythropoietin molecule. The modified EPO may be used in various therapeutic applications, such as in the treatment of anaemia. The present sequence is that of a human EPO epitope peptide which is related to the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 16,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
